# Tunnel detector (divisble)

### Type: TU – Digital 2 / M-Pulse2pro

phone: +49 37296 9383-500 info@pulsotronic-anlagentechnik.de www.pulsotronic-anlagentechnik.de

EN

## Type: TU

#### **APPLICATION**

The TU sensor serves for retrofitting a metal detector on existing lines as well as for mounting on conveyor belts and chutes that cannot be split. Though it is possible to split the sensor for mounting and to reassemble it afterwards, the tunnel detector TU provides highest sensitivity for metal detection. Due to this characteristics and the possible fade-out of vibrations and of the product effect the sensor can be applied almost universally. Con-

trary to other sensors this one is completely made of stainless steel. This allows application in the plastics as well as in the food industry.

#### **FUNCTION**

Contrary to classic metal sensors the working principle of this device is based on a system of three coils. This enables the user to analyze signals precisely and to draw conclusions on their origin. By this it is for example possible to distinguish the signals into vibration, product or metal. This additional data allows a more sensible reaction on metallic residua. The sensor is maintenance- and calibration-free.

#### HANDLING

Depending on the operating electronics the handling is realised via a membrane keyboard and a LC-display. Thus all important parameters can be viewed easily and fast and changed if necessary. The sensitivity of the detector also is adjustable this way. Detailed information is stated in the documentation of the electronic Digital2 and M-Pulse2pro.

#### MOUNTING

The sensing range of the sensor partially is situated above and under the opening of the detector. Big metallic pieces can already be detected in this sector. In order to guarantee the accurate functioning of the sensor, these sectors must be kept free of metal. This so-called metal-free zones are divided into two types:

- Metal-free zones for movable pieces
- Metal-free zones for non-movable pieces
  The dimension of these zones are specified in the particular data sheets.

### **TECHNICAL DATA**

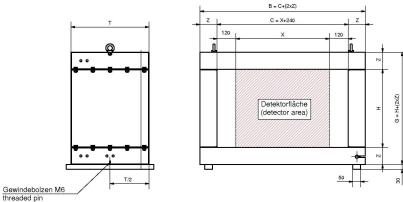

| Туре ТU 300х100 TU 2500х800                    |  |  |
|--|--|--|
| Mechanical data                                |  |  |
| Active aperture                                | heigth: 300 – 800 mm (50 mm steps)                 |  |
| Active aperture                                | width: 300 – 1.600 mm (100 mm steps)               |  |
| Material                                       | stainless steel (interior zone: epoxy)             |  |
| Mounting                                       | 4x drill hole                                      |  |
| Metall free zone for static parts              | 1,0 x sensor heigth                                |  |
| Metall free zone for moving parts <sup>2</sup> | 1,5 x sensor heigth                                |  |
| Conditions of use                              |  |  |
| Storage temperature                            | -10 – 50°C   |  |
| Operating temperature                          | 0 – 50°C   |  |
| Protection class                               | IP54   |  |
| Electrical connection                          | Supply via control unit (Attached with 3 m cable). |  |

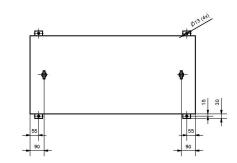

Type: TU

Order code (example): (e.g. Digital2 TU 1200x350) Electronic: Digital2

Dimension [mm]: sensor width X \* sensor height H

#### DIMENSION

| Dimension H | 300 – 800 mm | > 800 mm   |
|-------------|--------------|------------|
| Dimension T | 500 mm       | on request |
| Dimension Z | 110 mm       | on request |

1) Large metallic pieces can cause faulty activation even from great distances. The data referes to smaller pieces like deviating pulleys etc. For precise information please contact our service or sales department.
